

Preventing water system pollution

EJUST maximises water reuse across the university by:

1. Adopting native plants, reduce planting density and turf grass area, apply drip irrigation
2. and irrigation in early morning and late afternoon hours to reduce irrigation demand and
3. evaporative loss;
4. Employing water saving fixtures and appliances to save water in buildings;
5. Collecting rain water for irrigation and water features; and
6. Recycling grey water through wetlands, use recycled grey water for flushing and irrigation.

EJUST strategic plan to maximise water reuse across the university
